Bikaner, Rajasthan

Aspiring Data Scientist | Deep Learning Enthusiast

SUMMARY

Aspiring data scientist with a strong passion for deep learning and a solid foundation in data science gained through specialized coursework. Experienced in building and deploying machine learning models, with skills in statistical analysis, data visualization, and predictive modeling. Eager to apply deep learning techniques to uncover insights and drive innovation in data-driven projects.

PROJECT EXPERIENCE

Extractive Question Answering

- Objective: Built an extractive question-answering model by fine-tuning a pre-trained Transformer model on the SQuAD dataset.
- Tools & Technologies: TensorFlow, Hugging Face, TFAutoModelForQuestionAnswering, AutoTokenizer.
- Achievements: Deployed the model on Hugging Face Spaces, allowing users to input text and receive accurate answers to specific questions.

Laptop Price Prediction

- Objective: Developed a machine learning model to predict laptop prices based on various specifications and features. Also prepared analytics module to showcase key insights from data.
- Tools & Technologies: Python, Scikit-Learn, Pandas, NumPy, SVR, GridSearchCV.
- Achievements: Achieved 90% prediction accuracy through feature engineering and hyperparameter tuning on only 800 extracted laptop data.

Movie Recommendation System

- Objective: Created a movie recommendation system using word embeddings and vectorization techniques to find similar movies.
- Tools & Technologies: Word2Vec, CountVectorizer, MinMaxScaler, Python, Scikit-Learn, Cosine Similarity.
- Achievements: Extracted 10000 movies data, Developed a robust recommendation algorithm that suggests movies based on genre, plot, director, and more.

Food Trade EDA (Tableau)

- Objective: Conducted exploratory data analysis on global food trade data and visualized key insights using Tableau.
- Tools & Technologies: Tableau, Python (for data preprocessing).
- Achievements: Identified trends and patterns in food import/export between various countries and regions.

SKILLS

- Programming Languages: Python, SQL
- Data Analysis & Visualization: Pandas, NumPy, Matplotlib, Seaborn, Tableau
- Machine Learning & NLP: Scikit-learn, Transformers (Hugging Face), Word2Vec, Hyperparameter Tuning
- Data Processing: SQL, Excel, Data Cleaning, Feature Engineering
- Version Control: Git, GitHub
- Deployment & Cloud: Hugging Face Spaces, Streamlit, Docker, AWS

EDUCATION

Marudhar Engineering College

Bachelor's Degree in Civil Engineering
2013 – 2017

CERTIFICATIONS

Data Science Mentorship Program (DSMP) 1.0 - CampusX

- Completed comprehensive coursework covering data analysis, machine learning, and data visualization
